(54) Title: PHENOTYPE MODIFYING GENETIC SEQUENCES

(57) Abstract

Nucleic acid molecules capable of modifying phenotypic traits in eukaryotic cells and in particular plant cells. The nucleic acid molecules of the present invention are referred to as "phenotype modifying genetic sequences" or "PMGSs" and may be used to increase and/or stabilise or otherwise facilitate expression of nucleotide sequences being expressed into a translation product or may be used to down regulate by, for example, promoting transcript degradation via mechanisms such as co-suppression. The PMGSs may also be used to inhibit, reduce or otherwise down regulate expression of a nucleotide sequence such as a eukaryotic gene, including a pathogen gene, the expression of which, results in an undesired phenotype.

	the	e drawings, sheets/fig.
5.	to go beyo	rt has been established as if (some of) the amendments had not been made, since they have been considered and the disclosure as filed, as indicated in the Supplemental Box (Rule 70.2(c)).**
*		ts which have been furnished to the receiving Office in response to an invitation under Article 14 are referred to in this ally filed" and are not annexed to this report since they do not contain amendments (Rules 70.16 and 70.17).
**		sheet containing such amendments must be referred to under item 1 and annexed to this report

V.	Reasoned statement under Article 35(2) with regard to novelty, inventive step	r industrial applicability;
	citations and explanations supporting such statement	

	citations and explanations supporting such statement				
1.	Statement		***		
	Novelty (N)	Claims 2, 6-8, 10, 18 19	YES		
		Claims 1, 3-5, 9, 11-17 & 20	NO		
	Inventive step (IS)	Claims 2, 6-8, 10, 18 19	YES		
		Claims 1, 3-5, 9, 11-17 & 20	NO		
	Industrial applicability (IA)	Claims 1-20	YES		
		Claims None	NO		

2. Citations and explanations

Documents are referred to as D1 - D6 in the order in which they appear in the International Search Report.

D1 discloses sequences comprising at least sequences <400> 15, <400> 16, <400> 17, <400> 18 and <400> 23 at least at 25% similarity and in some cases at 100% similarity.

D2 discloses sequences comprising sequence <400> 29.

D3 discloses sequences comprising sequence <400> 26 and 400> 27

D1-D3 thus deprive claim 20 of it's novelty.

D4 discloses a promoter from a plant alpha amylase gene and the sequence thereof. This promoter appears to fill the requirements of a phenotype modulating genetic sequence as defined by claims 1, 3-5, 9, 11-17 and 20. Specifically this promoter increases the expression of a second nucleotide sequence (alpha amylase).

D5 disclose sugar regulatory sequences in alpha amylase genes that appear to fill the requirements of a phenotype modulating genetic sequence as defined by claims 1, 3-5, 9, 11-17.

D5 (see certain documents cited box) was not published prior to the priority of the current claims and thus does not at this time form part of the applicable prior art. However, this document will likely become grounds for an objection on whole of contents under Australian national phase examination.

D 6 discloses a transcription factor regulating alpha amylase promoter initiated expression. Such a transcription factor falls within the scope of claims 1, 3-5, 9, 11-17.

Claims 1-20 are considered to have industrial applicability.
